BEST PRACTICES CHECKLIST

✅ DO

- Use **primary teal** for main CTAs and navigation
- Use **accent lime** sparingly for highlights (10-15% of interface)
- Use **neutral grays** for 70-80% of interface (text, backgrounds, borders)
- Always test color combinations with contrast checkers
- Use **semantic colors** (success, warning, error) only for their intended purpose
- Use **pastel backgrounds** for subtle section differentiation
- Provide visual feedback beyond color (icons, text, patterns)
- Use darker shades (700-900) for text on light backgrounds
- Use lighter shades (100-400) for text on dark backgrounds
- Pair brand colors with high-contrast text

❌ DON'T

- Don't use **accent lime** for primary actions (too bright)
- Don't use **brand colors (#E4EC84, #EE735D, #C3DDDD)** directly for text on white
- Don't rely on color alone to convey meaning (accessibility)
- Don't use **semantic colors** interchangeably (red for success, green for error)
- Don't use multiple pastel backgrounds in close proximity
- Don't use **low-contrast combinations** (<3:1) for any text
- Don't apply saturated colors to large surface areas
- Don't use warm and cool pastels together without neutral separation
- Don't ignore WCAG guidelines for text contrast
- Don't use more than 3-4 colors in a single component
